

CSCI 230 -- Makeup Assignment

Name: Nero Li

You can use this assignment to earn up to 10 points for a missing pop quiz, a missing in-class exercise, or a missing lab. If you did not miss any assignment, you can use it to earn up to 5 extra credit points.

Which assignment do you need to make up (or EC if applicable)? EC

Given a data file of integer values, write a program to find the total number of inversions. If value i comes before value j in the file and value i is larger than value j then it is an inversion. We need to count all such pairs in the file and output it to the screen. This count would tell us how closely the file is sorted. For example, the file with 1 9 6 4 5 has 5 inversions: (9, 6), (9, 4), (9, 5), (6, 4), (6, 5).

You need to provide two different algorithms to solve this problem, a simple $O(n^2)$ algorithm with a nested loop and a fast divide-and-conquer algorithm. Once you confirm that they work on a small file like the 5 values above, run the two data files, small1k.txt and large100k.txt, used in PA 4.

What is the running time for your fast divide-and-conquer algorithm? You can either do a running time analysis or an experimental analysis by collecting run times.

If we are using simple inversion check:

Running time for small1k.txt is 5.0044 millisecond.

Running time for large100k.txt is 47076.1 millisecond.

If we are using merge inversion check:

Running time for small1k.txt is 33.9031 millisecond.

Running time for large100k.txt is 1758.01 millisecond.

Copy/paste your source code and output below.

makeup.cpp:

```
/* Program: Makeup_assignment
   Author: Nero Li
   Class: CSCI 230
   Date: 06/02/2022
   Description:
```

```
    Given a data file of integer values, write a program to find
    the total number of inversions. If value  $i$  comes before value
     $j$  in the file and value  $i$  is larger than value  $j$  then it is an
```

inversion. We need to count all such pairs in the file and output it to the screen. This count would tell us how closely the file is sorted

I/O below:

Simple Inversion for test.txt:

(9, 6)

(9, 4)

(9, 5)

(6, 4)

(6, 5)

Inversion count: 5

Simple Inversion for small1k.txt:

Inversion count: 246372

Time used: 5.0044 ms

Simple Inversion for large100k.txt:

Inversion count: 2407913387

Time used: 47076.1 ms

Merge Inversion for test.txt:

(6, 4)

(6, 5)

(9, 6)

(9, 4)

(9, 5)

Inversion count: 5

Merge Inversion for small1k.txt:

Inversion count: 3583

Time used: 33.9031 ms

Merge Inversion for large100k.txt:

Inversion count: 568242

Time used: 1758.01 ms
